DEBABRATA KANGSA BANIK

Frontend Engineer | React, TypeScript & Node.js

+91 8822613012 · debabratabanik02@gmail.com · LinkedIn · GitHub

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, JAVA, SQL

Frontend: React.js, React Router, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, REST API Design, MongoDB

Libraries & Tools: TanStack Query, Zustand, Zod, Git, GitHub, Postman, Figma

Deployment: Vercel, Render

EXPERIENCE

Frontend Developer Intern | ZYMO — Mar 2025 – Jun 2025

React · Tailwind · Figma · Firebase

- Owned the end-to-end frontend redesign of 5 product sections, translating Figma designs into responsive React and Tailwind components while collaborating closely with design to handle cross-device edge cases.
- Collaborated on the 'Buy' user journey alongside backend engineers, handling front-end responsiveness and edge cases.
- Established sitewide typography standards adopted across the entire application, reducing visual inconsistency and creating a reusable design foundation for future development.

PROJECTS

Bookmark Manager Live | GitHub

React 19 · Node.js · Express · MongoDB · TanStack Query · Zod · Tailwind · Vercel · Render

- Built a production-structured Express REST API with strict layer separation (routes → controllers → services → models), custom error handling, Zod validation, and rate limiting middleware.
- Eliminated manual data entry entirely by building an auto-scraping backend that extracts metadata (title, description, author, publisher) from any pasted URL using metascraper.
- Designed a MongoDB schema supporting tag filtering, full-text search, multiple sort modes, pin/archive states, and per-link visit tracking - all surfaced through a responsive, filter-driven UI.
- Hardened the API against common attack surfaces. Helmet headers, CORS allowlist, Zod schema validation on all routes and sanitize-html on all user inputs.

Weather Now (Frontend Mentor Hackathon**)** Live | GitHub

React · TypeScript · TanStack Query · Tailwind · Open-Meteo API · Vercel

- Integrated two third-party APIs (Open-Meteo, OpenStreetMap Nominatim) to deliver real-time forecasts with location autocomplete and geolocation detection.
- Implemented frontend performance optimizations by utilizing TanStack Query for caching and background refetching, significantly reducing redundant API calls and network usage.

EDUCATION

B.Tech – Electronics & Telecommunications Engineering — 2020 – 2024

Kalinga Institute of Industrial Technology · **CGPA: 8.02**

Open Source & Community Builds

Open Source Contributor | EduHaven | React, Tailwind, MongoDB — Sep 2025 - Oct 2025

- Delivered consistent open-source contributions focusing on frontend performance optimizations, responsive UI rebuilds, and full-stack feature enhancements.
- Engineered responsive skeleton UIs to improve perceived loading performance and resolved cross-browser layout edge cases.
- Extended MongoDB schemas and integrated the corresponding frontend UI to support new user statistics, ensuring seamless data flow across the stack.
